

User Empathy Map

ServiceNow Custom App Development: Metro Ticket Booking System

USER PERSONA:

Corporate Commuter (Employee)

RESEARCH FOCUS:

Service Portal & Now Mobile UX

PLATFORM TARGET:

ServiceNow App Engine / Flow Designer

Alex Morgan

SENIOR BUSINESS ANALYST (FREQUENT COMMUTER)

Travels daily between local corporate campuses and client offices using public metro. Relies heavily on mobile services and expects zero friction during booking and travel expense settlement.

Core Goal: Quick ticket generation without manual paper receipts.

Primary Channel: Mobile Device (Now Mobile)

Frequency: 8–12 trips / week

1. THE 4-QUADRANT EMPATHY MAP

A synthesis of user observation, behavioral feedback, and qualitative interviews regarding corporate travel ticketing.

SAYS (EXTERNAL EXPRESSIONS)

- "I hate filling out long expense forms for a simple metro ticket."
- "Why do I have to wait days to get my small travel money back?"
- "I lost my physical ticket receipt, so now I can't claim reimbursement."
- "I need an easy way to show my QR code at the metro turnstile without delays."

THINKS (INTERNAL EXPECTATIONS)

- "Booking a work train ticket should be as seamless as ordering an Uber."
- "Will my manager approve my weekly travel pass before my trip tomorrow?"
- "Why isn't corporate travel integrated into our main ServiceNow mobile portal?"
- "I hope the ticket loads quickly even if station cellular coverage is spotty."

DOES (OBSERVED BEHAVIORS)

- Buys transit tickets via personal apps and manually keeps track of receipts.
- Rushes through stations while trying to locate digital confirmation emails.
- Repeatedly pings HR or Travel Desk for status on pending travel claims.
- Takes screenshots of QR tickets as a backup in case the app freezes.

FEELS (EMOTIONAL STATES)

- **Frustrated:** By tedious post-travel manual reimbursement workflows.
- **Anxious:** About delayed approvals when rapid client travel is needed.
- **Relieved:** When ticket booking takes under 30 seconds on a phone.
- **Confident:** Knowing all travel expenses auto-sync with Finance.

2. PAIN POINTS VS. GAIN DRIVERS

Critical Pain Points

- Manual paper receipt tracking and risk of lost claims.
- Excessive approval turnaround for routine travel expenses.
- Context switching between multiple consumer apps and enterprise tools.

Desired Gain Drivers

- Instant digital QR ticket delivery directly on mobile screen.
- Auto-approval rules for standard commute trips.
- Seamless automatic expense posting to ServiceNow HR/ Finance module.

3. MAPPING USER NEEDS TO SERVICENOW ARCHITECTURE

Translating empathy map insights into functional platform requirements and technical implementation artifacts.

EMPATHY INSIGHT / USER NEED	SERVICENOW COMPONENT	TECHNICAL SOLUTION DESIGN	IMPACT AREA
"I need to book on the go in seconds."	Now Mobile / Portal	Dedicated Service Catalog item with pre-filled favorite/frequent route options.	UX Optimization
"I don't want to wait for manual approvals."	Flow Designer	Automated approval engine for single journey fares below corporate threshold.	Process Speed
"I need my ticket handy at the gate."	Push / REST Integration	IntegrationHub outbound call to Metro API; push dynamic QR token to phone.	Technical Delivery
"I hate filing manual travel expenses."	Auto-Expense Logging	Scripted business rule to automatically log travel line-items into expense tables upon ticket issuance.	Automation
